# PORCELAIN & CERAMIC TILE

---

Tile is one of the lowest-maintenance flooring options available. With proper care, you'll enjoy the beauty of your porcelain or ceramic surfaces for years to come.

## SWEEPING

Regular sweeping loosens and removes most dirt.

## MATS

Use doormats to keep dirt from coming into your home or business, and shake them out often. This will reduce the amount of dirt being dragged across your tile floor, which reduces the wear on the finished surface.

## MOPPING

Tile floors should be damp-mopped using manufacturer-recommended grout and tile cleaners. Simple Green is a good cleanser.

### Do:

- \* Clean up spills quickly to avoid grout staining.
- \* Tile is very durable, however it is not indestructible and may chip or crack. Avoid dropping heavy items repeatedly!
- \* Take proper precautions when moving heavy objects or furniture across your tile floor.
- \* Cover furniture legs with protectors to guard floors against scratching.

### Don't:

- \* Use steel wool, scouring powders, or other abrasive cleaners as they can scratch the finish of the tile.
- \* Use bleach or ammonia-based cleaners as they can discolor your grout.
